Introduction

The document describes the contents of the replication package for "How Workers Keep Up with Inflation" (Afrouzi et al. (2025)), revision requested in the *Quarterly Journal of Economics.* Actions needed on the replicator's part are listed in the "Instructions to Replicators" section.

Overview

The code in this replication package constructs the analysis file from multiple data sources (see "Details on each Data Source") using Python, Stata, R and Julia. One main file (`run_all.py`) runs all the code to generate the data for the 43 figures and 5 tables in the main text and the online appendix of the paper. The replicator should expect the code to run about 20 minutes.

Data Availability and Provenance Statements

Fill here

Statement about Rights

- ☐ I certify that the author(s) of the manuscript have legitimate access to and permission to use the data used in this manuscript.
- ☐ I certify that the author(s) of the manuscript have documented permission to redistribute/publish the data contained within this replication package. Appropriate permission are documented in the LICENSE.txt file.

Summary of Availability

- ☐ All data **are** publicly available.
- ☐ Some data **cannot be made** publicly available.
- ☐ **No data can be made** publicly available.
- ☐ Confidential data used in this paper and not provided as part of the public replication package will be preserved for ___ years after publication, in accordance with journal policies.

Details on each Data Source

"Current Population Survey" (CPS)	cps_00110.dat cps_00108.dat cps_00111.dat	data/moments/raw data/raw	TRUE	Flood et al. (2024)

Each dataset from JOLTS is publicly available and was downloaded from https://www.bls.gov/jlt/data.htm. Using the One Screen or Multi-Screen tools, we customized the data to extract (i) aggregate levels (jolts_level.csv), (ii) aggregate rates (jolts_rates.csv), (iii) levels by industry (jolts_industry_level.csv), and (iv) rates by industry (jolts_industry_rates.csv) for all measures of interest.

Processed data for the Atlanta Fed Wage Tracker were downloaded from https://www.atlantafed.org/chcs/wage-growth-tracker and are publicly available. The underlying microdata used to construct the wage tracker are [...]

Each FRED data series was obtained from publicly accessible pages. The following datasets can be downloaded directly by clicking "Download" on each respective page:

- EU.csv: https://fred.stlouisfed.org/series/LNS17400000
- UE.csv: https://fred.stlouisfed.org/series/LNS17100000
- fred_unrate.csv: https://fred.stlouisfed.org/series/UNRATE
- fred_emp2pop.csv: https://fred.stlouisfed.org/series/LREM64TTUSM156S
- CPI.csv: https://fred.stlouisfed.org/series/CPIAUCSL

The following datasets must be constructed manually using the "Edit Graph" functionality on the FRED website or by computing manually from the raw series:

- NE.csv: https://fred.stlouisfed.org/series/LNS17200000 divided by https://fred.stlouisfed.org/series/LNS15000000
- NU.csv: https://fred.stlouisfed.org/series/LNS17600000 divided by https://fred.stlouisfed.org/series/LNS15000000
- fred_employment.csv: https://fred.stlouisfed.org/series/CE16OV merged with https://fred.stlouisfed.org/series/UNEMPLOY on month-year
- profit_share.csv: https://fred.stlouisfed.org/series/CP divided by https://fred.stlouisfed.org/series/GDP

Additionally, employer-to-employer probability measure constructed by Fujita, Moscarini, and Postel-Vinay (2024) can be downloaded from a FRED website (https://fred.stlouisfed.org/series/FMPSA3MA) as well. FMP data can also be downloaded using https://www.philadelphiafed.org/surveys-and-data/macroeconomic-data/employer-to-employer-transition-probability#data-download. We note that the 3-months moving averages differ between two datasets due to the different initial time periods, and we used the series downloaded from the FRED website for our analysis.

ADP Pay Insights data can be directly downloaded from https://payinsights.adp.com/ (Click 'Download historical data').

LEHD data can be downloaded from https://ledextract.ces.census.gov/. To download employment_by_education.csv, a replicator must go to 'All QWI Measures' page, select 'Sex and Education' in '3. Worker Characteristics' tab, select all the education levels from E1 to E5, and select the quarters from 20161Q to 20241Q. To download flows_by_education.csv, the same procedure must be done in 'Job Flows' page.

Vacancy stock data (barnichon_vacancy.csv) constructed as part of Barnichon (2010) can be directly downloaded by the author's website: https://sites.google.com/site/regisbarnichon/research. See under '19. Building a composite Help-Wanted Index' and click the associated Google Sheets link to download the data.

Work from home measures (onet_wfh_code.csv) constructed as part of Dingel and Neiman (2020) can be directly download by the author's publicly available Github page: https://github.com/jdingel/DingelNeiman-workathome/tree/master/onet_to_BLS_crosswalk/output.

Data on annual hours worked and employment by industry (hours_employed_industry.csv) can be downloaded from the link in the bottom paragraph from https://www.bls.gov/productivity/technical-notes/industry-hours-and-employment.htm.

CPS data can be downloaded from https://cps.ipums.org/cps/. In 'Select Data' tab, you can select the data filters to obtain the same datasets used for moment generation of this paper. To extract the yearly ASEC data (cps_00110.dat), a replicator must select the yearly 'IPUMS-CPS.ASEC' sereis from 2015 to 2023 and select the same set of variables as detailed in /code/2_moments/2_0_build.do. To extract the monthly worker flows data (cps_00108.dat, cps_00111.dat), a replicator must select the monthly 'IPUMS-CPS' series from January 2014 to June 2024.

Gallup Analytics data was accessed through the proxy server provided by the University of Chicago. The replicator may be able to access the data using their institution's subscription.

Dataset list

Data file	Source	Notes	Provided
`data/raw/adp/adp_pay_hitory.csv`	ADP	Serves as input for Figure 2.3.A and 2.3.B.	Yes
`data/raw/atl_fed/`atl_fed_wage_raw.dta	ATL	Serves as input for Figure	No

		B.5.B, B.5.C, B.8.A, B.8.B, and B.8.C	
data/raw/atl_fed/atl_fed_wage.xlsx	ATL	Serves as input for Figure 1.1.B, 2.4.A, 2.4.B, B.5.A, B.6.A, B.6.B, B.7.A, B.7.B, and B.7.C	Yes
data/raw/barnichon/barnichon_vacancy.xlsx	BAR	Serves as input for Figure 1.1.A, 6.1.A, and 6.1.B.	Yes
data/raw/bls/hours_employed_industry.xlsx	BLS	Serves as input for Figure B.9.	Yes
data/raw/dingelneiman/onet_wfh_code.csv	WFH	Serves as input for Figure 2.5.A, 2.5.B, and 2.5.C.	Yes
data/raw/fmp/fmp_ee_flows.csv	FMP	Serves as input for Figure 2.2.A.	Yes
data/raw/fred/CPI.csv	FRED	Serves as input for Figure 1.1.A, 1.1.B, 2.3.A, 2.3.B, 2.4.A, 2.4.B, 2.5.A, 2.5.B, 2.5.C, 6.1.A, 6.1.B, B.1.A, B.1.B, B.6.A, B.6.B, B.7.A, B.7.B, B.7.C, B.8.A, B.8.B, B.8.C, B.14.A, B.14.B, B.15, and Table B.4.	Yes
data/raw/fred/EU.csv	FRED	Serves as input for Figure B.4.	Yes
data/raw/fred/fred_emp2pop.csv	FRED	Serves as input for Figure B.2.A, B.2.B, and B.2.C.	Yes
data/raw/fred/fred_employment.csv	FRED	Serves as input for Figure 1.1.A, 2.2.B, 6.1.A, 6.1.B, B.2.A, B.2.B, B.2.C, B.4, and B.13.	Yes
data/raw/fred/fred_urate.csv	FRED	Serves as input for Figure B.2.A, B.2.B, and B.2.C.	Yes
data/raw/fred/NE.csv	FRED	Serves as input for Figure B.3.A and B.3.B.	Yes
data/raw/fred/NU.csv	FRED	Serves as input for Figure B.3.A and B.3.B.	Yes
data/raw/fred/profit_share.csv	FRED	Serves as input for Figure B.14.A, B.14.B, and B.15.	Yes
data/raw/fred/UE.csv	FRED	Serves as input for Figure 2.2.B, B.2.A, B.2.B, B.2.C, and B.4.	Yes
data/raw/jolts/jolts_industry_level.xlsx	FRED	Serves as input for Figure B.9.	Yes
data/raw/jolts/jolts_industry_rates.xlsx	FRED	Serves as input for Figure B.9.	Yes
data/raw/jolts/jolts_level.csv	FRED	Serves as input for Figure 1.1.A, 6.1.A, 6.1.B, and	Yes

		B.13.	
data/raw/jolts/jolts_rates.csv	FRED	Serves as input for Figure 2.1, B.1.A, and B.1.B.	Yes
data/raw/lehd/employment_by_education.csv	LEHD	Serves as input for Figure B.10.	Yes
data/raw/lehd/flows_by_education.csv	LEHD	Serves as input for Figure B.10.	Yes
data/processed/figure_1_1_A.csv	BAR, FRED, JOLTS	Combines barnichon_vacancy, fred_employment, jolts_level, and CPI, serves as input for Figure 1.1.A.	Yes
data/processed/figure_1_1_B.csv	ATL, FRED	Combines atl_fed_wage and CPI, serves as input for Figure 1.1.B.	Yes
data/processed/figure_2_1.csv	JOLTS	Uses jolts_rates, serves as input for Figure 2.1.A, Figure 2.1.B, and Figure 2.1.C.	Yes
data/processed/figure_2_2_A.csv	FMP	Uses fmp_ee_flow, serves as input for Figure 2.2.A.	Yes
data/processed/figure_2_2_B.csv	FRED	Uses fred_employment and UE, serves as input for Figure 2.2.B.	Yes
data/processed/figure_2_3.csv	ADP, FRED	Combines adp_pay_history and CPI, serves as input for Figure 2.3.A and 2.3.B.	Yes
data/processed/figure_2_4.csv	ATL, FRED	Combines atl_fed_wage and CPI, serves as input for Figure 2.4.A and 2.4.B.	Yes
data/processed/figure_2_5_temp1.csv data/processed/figure_2_5_temp2.csv	ATL, WFH	Combine atl_wage_data_raw and onet_wfh_code, serves as input for figure_2_5	Yes
data/processed/figure_2_5.csv	ATL, WFH, CPI	Combines figure_2_5_temp1, figure_2_5_temp2, and CPI, serves as input for Figure 2.5.A, 2.5.B, and 2.5.C	Yes
data/processed/figure_6_1.csv	BAR, FRED, JOLTS	Combines barnichon_vacancy, fred_employment, jolts_level, and CPI, serves as input for Figure 6.1.A and 6.1.B.	Yes
data/processed/figure_B_1.csv	JOLTS, FRED	Combines jolts_rates and CPI, serves as input for Figure B.1.A and Figure	Yes

		B.1.B	
data/processed/figure_B_2.csv	FRED	Combines fred_employment, UE, fred_urate, and fred_emp2pop, serves as input for Figure B.2.A, B.2.B, and B.2.C	Yes
data/processed/figure_B_3.csv	FRED	Combines NE and NU, serves as input for Figure B.3.A and Figure B.3.B.	Yes
data/processed/figure_B_4.csv	FRED	Combines fred_employment, EU, and UE, serves as input for Figure B.4.	Yes
data/processed/figure_B_5_A.csv	ATL	Uses atl_fed_wage, serves as input for Figure B.5.A.	Yes
data/processed/figure_B_5_B_C.csv	ATL	Uses atl_fed_wage_raw, serves as input for Figure B.5.B and Figure B.5.C.	Yes
data/processed/figure_B_6.csv	ATL, FRED	Combines atl_fed_wage and CPI, serves as input for Figure B.6.A and B.6.B.	Yes
data/processed/figure_B_7.csv	ATL, FRED	Combines atl_fed_wage and CPI, serves as input for Figure B.7.A, B.7.B and B.7.C.	Yes
data/processed/figure_B_8_temp1.csv data/processed/figure_B_8_temp2.csv	ATL	Uses atl_fed_wage_raw, serves as input for figure_B_8	Yes
data/processed/figure_B_8.csv	ATL, FRED	Combines figure_B_8_temp1, figure_B_8_temp2, and CPI, serves as input for Figure B.8.A, B.8.B, B.8.C.	Yes
data/processed/figure_B_9.csv	BLS, JOLTS	Combines hours_employed_industry, jolts_industry_level, and jolts_industry_rates, serves as input for Figure B.9.	Yes
data/processed/figure_B_10.csv	LEHD	Combines flows_by_education and employment_by_education, serves as input for Figure B.10.	Yes
data/processed/figure_B_12.csv	GALL	Uses gallup_data, serves as input for Figure B.12.	Yes
data/processed/figure_B_13.csv	JOLTS,	Combines jolts_level and	Yes

	FRED	fred_employment, serves as input for Figure B.13.	
data/processed/figure_B_14_A.csv	FRED, BAR, JOLTS	Combines CPI, profit_share and figure_1_1_A, serves as input for Figure B.14.A.	Yes
data/processed/figure_B_14_B.csv	FRED, BAR, JOLTS	Combines CPI, profit_share and figure_1_1_A, serves as input for Figure B.14.B.	Yes
data/processed/figure_B_15.csv	FRED, BAR, JOLTS	Combines CPI, profit_share and figure_1_1_A, serves as input for Figure B.15 and Table B.4.	Yes
data/moments/raw/CPI.xls	FRED	Same data as CPI.csv	
data/moments/raw/cps_00108.dat	CPS	Serves as input for flow_moments.csv	
data/moments/raw/cps_00110.dat	CPS	Serves as input for flow_moments.csv and wkly_earn_moments.dta	
data/moments/raw/ee_monthly.csv	FMP	Same data as figure_2_2_A	
data/moments/raw/shimer_decomposition_data.csv	FRED	Same data as figure_B_4	
data/moments/output/flow_moments.csv	FRED, CPS, FMP		
data/moments/output/wkly_earn_moments.dta	FRED, CPS, FMP		

Computational requirements

Software Requirements

- ☐ The replication package contains one or more programs to install all dependencies and set up the necessary directory structure.
- Stata (code was last run with version 19)
- Python (code was last run with version 3.13.5 with the installed dependencies listed below.)
  - `pandas 2.3.1`
  - `numpy 2.3.1.`
  - `matplotlib 3.10.3`
  - `sckit-learn 1.7.0`
  - `statsmodels 0.14.5`

  - `openpyxl 3.1.5`
  - the file "`0_setup/requirements.txt`" lists these dependencies, please run "`pip install -r requirements.txt`" as the first step.
- Julia (code was last run with version 1.11 with the installed dependencies listed below.)
  - `Binscatters v0.4.0`
  - `CSV v0.10.15`
  - `CategoricalArrays v0.10.8`
  - `DataFrames v1.7.0`
  - `DataFramesMeta v0.15.4`
  - `DelimitedFiles v1.9.1`
  - `FileIO v1.17.0`
  - `LaTeXStrings v1.4.0`
  - `PGFPlotsX v1.6.2`
  - `PanelDataTools v0.3.0`
  - `PeriodicalDates v2.0.0`
  - `Plots v1.40.16`
  - `Revise v3.8.0`
  - `Dates v1.11.0`
- R
  - `ipumsr 0.9.0`
  - `tidyverse 2.0.0`
  - `ggplot2 3.5.2`
  - `writexl 1.5.4`
  - `haven 2.5.5`

Controlled Randomness

- ☐ Random seed is set at line ____ of program _____
- ☐ No Pseudo random generator is used in the analysis described here.

Memory, Runtime, Storage Requirements

Summary

Approximate time needed to reproduce the analyses on a standard (2025) desktop machine:

- ☐ <10 minutes
- ☐ 10-60 minutes
- ☐ 1-2 hours
- ☐ 2-8 hours
- ☐ 8-24 hours
- ☐ 1-3 days
- ☐ 3-14 days
- ☐ > 14 days

Approximate storage space needed:

- ☐ < 25 MBytes
- ☐ 25 MB - 250 MB
- ☐ 250 MB - 2 GB
- ☐ 2 GB - 25 GB
- ☐ 25 GB - 250 GB
- ☐ > 250 GB
- ☐ Not feasible to run on a desktop machine, as described below.

Details

The code was last run on a **4-core Intel-based laptop with macOS Sequoia 15.4.1, 16 GB of LPDDR4X memory, and 1TB of free space**.

Description of programs/code

- run_all.py will run all the dependencies described below as well as the codes that set up the working environment.
- Programs in setup will adjust the default path for each replicator.
- Programs in code/0_process_data will process the primitive data in data/raw and save the processed data in data/processed.
- Programs in code/1_figures will use the processed data in data/processed and generate the outputs in output/figures and output/tables.

- Programs in code/2_moments will calculate the model moments using the primitive data in data/moments/raw and save the output in data/moments/output.

Instructions to Replicators

- Download the data files referenced above. Each should be stored in the prepared subdirectories of data/. Unzip the data files and rename them as referenced above.
- Edit run_all.py (lines) to adjust the executable paths for Stata, Julia and R.
- Edit 0_setup/master.do (lines) and path.yaml (lines) to adjust the default paths.
- Run `run_all.py` to run all steps in sequence.
- If the above sequence results in errors, the replicator can also edit the relative paths defined in each program and run the programs separately, following the order listed in run_all.py.

Details

- Scripts provided in the `setup/` folder will be automatically run to install the required packages for each programming language. Otherwise, the replicator must install the required packages to run the replication codes.
